LinkedIn: ekaymaz · GitHub: EmirKymz · CodinGame: EmirKymz

Profile

Self-driven and solution-oriented software developer with a solid background in C, C++ and Python. Skilled in containerization, Linux environments and modern DevOps tools including Docker and Kubernetes. Currently building middleware for HGW (home gateway) devices for Türk Telekom. Completed core training and advanced system-level projects at Ecole 42. Eager to apply problem-solving and teamwork skills to real-world, scalable software systems.

Experience

Retfox 12/2025 – Present | Türkiye
Assistant Software Systems Specialist · Türk Telekom Modem Team
- Developing **middleware applications** for **HGW (home gateway)** devices used by Türk Telekom.
- Device management and **activation flows** run through the systems our team builds.
- Working with **Groovy**, **Camunda** (BPMN workflows) and **SQL**.

HepsiJet 10/2024 – 10/2025 | Istanbul, Türkiye
DevOps Intern
- Contributed to infrastructure improvements using **Jenkins**, **Docker**, **Kubernetes**, **Elasticsearch** and **Kibana**.
- Developed and automated **daily performance reports** for operational units using Jenkins pipelines and SMTP integration.
- Built an in-house **DNS management application** as an alternative to the limited Windows DNS Manager, deepening my understanding of DNS architecture and zone scopes.
- Supported the DevOps team in debugging, log analysis and container orchestration across staging and production.

Ecole 42 02/2023 – 04/2023 | Kocaeli, Türkiye
Tutor
- Mentored newly enrolled students as they adapted to Ecole 42's project-based learning system.
- Maintained clear communication with students for a smooth onboarding.
- Supervised exams and practical assessments to maintain academic integrity.

Education

Ecole 42
Software Engineering
Advanced Curriculum: 2024 – Present
Common Core: 2021 – 2024

Skills

Languages: C, C++, C#, Python, Bash, Groovy, COBOL
DevOps & Tools: Docker, Kubernetes, K3s, Jenkins, Argo CD, Vagrant, Nginx, Linux
Observability: Elasticsearch, Kibana
Workflow & Data: Camunda, SQL, PostgreSQL
Others: Git, REST APIs, JWT, 2FA, Django, Next.js

Languages

Turkish – Native **English** – B1

Certificates

- CyberOps Associate – Cisco
- Introduction to Cybersecurity – Cisco
- COBOL Programming with VSCode – IBM

Projects

Transcendence
Full-Stack Web App | Django, JavaScript, Docker, PostgreSQL
- Collaborated with a **5-person team** on a multiplayer Pong platform with **2FA-secured login**, **chat rooms** and **user profiles**.
- Worked on **backend API development and deployment** with Django REST Framework and Docker for a modular service architecture.

Inception of Things (private repo)
Infrastructure | K3s, Vagrant, Nginx Ingress, Argo CD
- Built a lightweight **Kubernetes (K3s)** cluster with **Vagrant**, provisioning separate VMs for server and agents.
- Deployed three containerized web apps behind **Nginx Ingress**, with a **GitOps CI/CD pipeline using Argo CD** syncing from GitHub.

Inception
System Administration | Docker
- Built isolated Docker services (Nginx, WordPress, MariaDB) inside a Linux VM; images, volumes and orchestration.

ft_irc
Internet Relay Chat | C++
- Built a custom IRC server for HexChat clients: commands, message routing, socket programming and real-time parsing.

Personal Portfolio Website
Portfolio | Next.js, Docker, Nginx, Cloudflare
- Self-hosted portfolio with **Next.js**, **Docker** and **Nginx** behind a **Cloudflare Tunnel**, with DNS/HTTPS via Cloudflare.
